RE: 2004 Water Quality Monitoring Data Final Report
Oconto Falls (Upper) Hydroelectric Project (FERC #2523) — 038

Dear Secretary:

Enclosed are the Final Report copies of the 2004 Water Quality Monitoring data compiled from impoundment and tailwater sampling performed during July 1 through September 30 of 2004 for the two Projects listed above. These reports were originally sent to the FERC Chicago Regional Office earlier this year in error.

Draft copies of these reports were sent to Mr. Larry Thompson - Staff Biologist, U.S. Fish and Wildlife Service and Mr. Jim Reyburn - Water Quality Biologist, Wisconsin Department of Natural Resources on January 7, 2005 for solicited review per the approved Article 405 Water Quality Monitoring Plan for Oconto Falls (Upper) Hydroelectric Project (FERC #2523) and approved Article 404 Water Quality Monitoring Plan for Oconto Falls (Lower) Hydroelectric Project (FERC #2689).

We have incorporated Mr. Reyburn's single comment request by adding into each report an aerial photo location map indicating the sampling locations of both studies.

No comments were received from Mr. Thompson for either of these report's draft copies.

If you have any questions regarding these reports, please feel free to contact me or Mr. Scott Klabunde at 920-293-4628.

Sincerely yours,
NORTH AMERICAN HYDRO, INC.

Summary

2004 marked the first session of water quality sampling under the FERC approved "Water Quality Monitoring Plan Per License Article 405 for the Oconto Falls (Upper) Hydroelectric Project – FERC Project # 2523 – N.E.W. Hydro, Inc."

FERC License Article 405 water quality sampling at the Oconto Falls (Upper) Hydroelectric Project is performed concurrently with nearly identical water quality sampling requirements at the Oconto Falls (Lower) Hydroelectric Project (FERC Project # 2689), which is located approximately 2000 feet downstream from the Oconto Falls (Upper) Hydroelectric Project. Sampling is performed once every 5 years for the duration of the FERC License.

Upstream (Impoundment) sampling consists of weekly vertical sampling of dissolved oxygen, temperature at 1-meter intervals and water clarity from a fixed location representative of the maximum depth in the impoundment. Downstream sampling consists of in-situ sampling for dissolved oxygen (D.O.), pH, specific conductivity and temperature, logged once every 15-minutes throughout the duration of the study at a fixed location in the Project's tailrace.

A preliminary reconnaissance was performed on June 30, 2004 to determine the most viable impoundment and tailrace sampling locations. A sonar grid search was performed of the impoundment. Site selection was based on the following criteria: maximum depth vs safety, repeatability of relocating the site, and accessibility. The impoundment site selected is located immediately upstream of the eighth boat-barrier buoy from the powerhouse intake bays. This location is approximately 60 yards upstream and perpendicular to the center of the southernmost tainter gate. The maximum impoundment depth is located approximately 20 yards upstream from this tainter gate and is approximately 0.7 feet deeper than the selected site, however, the close proximity to functioning tainter gates and the mud bottom structure of the impoundment at this location prevents a safe sampling environment. Impoundment D.O., temperature and clarity sampling were performed following site selection. The tailrace site selected is located immediately upstream of the confluence of the turbine tailrace and the spillway tailrace approximately 4 feet from the south shoreline of the turbine tailrace. The location is on the ledge of a steep drop off. This location provides for evenly mixed water discharged from the turbines prior to downstream riffle effect aeration during low flow periods, easy access as well as relative isolation from public access. Following tailwater site selection, a Hydrolab Datasonde 3 sample logger was calibrated, activated and installed in a flow-through horizontal mount on the bottom of the tailrace at the site location.

Impoundment sampling conducted at roughly one week intervals resulted in 14 sampling events including the June 30 data. A calibrated YSI Model 51B portable D.O. meter and a 50 foot cabled 5739 probe with standard membrane was used for all D.O. sampling. A standard Secchi disk was used to determine water clarity. On July 29, 2004, D.O. was observed below the 5.0 mg/L Wisconsin minimum standard between 6.46 meters below the

surface and the bottom of the impoundment (7.78 meters). Additional D.O. and temperature samples were taken during this sampling event in order to better define the D.O. loss gradient. The Table 1 indicates the D.O./temperature/depth readings logged. This was the only instance in which D.O. was observed lower than the Wisconsin minimum standard during the 3-month sampling period.

During the course of the 3-month sampling period, sensors of the tailrace Datasonde 3 sample logger unit were cleaned and verified for calibration accuracy on a weekly basis during each day impoundment sampling was performed. Additionally, the YSI Model 51B

D.O. meter and 50 foot cabled 5739 probe with standard membrane used for impoundment sampling was used to cross-check D.O. calibration continuity with the Datasonde 3 D.O. sensor. The unit's internal batteries were replaced once in mid-August to ensure proper power supply levels through the conclusion of the sampling period. There were no logging interruptions. Logged data was downloaded weekly and monthly. No unusual readings were observed in collected data during the 3-month sampling session. Table 2 displays the minimum, maximum and average sensor readings for each of the three months' logged data. Precise dates and times are available in the accompanying appendices.

Requirements for Studies and History

The Federal Energy Regulatory Commission (FERC), has stipulated as a requirement of the Oconto Falls (Upper) Hydroelectric Project License (Article 405), issued November 20, 1997, that a Water Quality Study shall be performed beginning five (5) years after license issuance and once every five (5) years thereafter for the term of the license. Article 405 also required that a monitoring plan should be filed with the Commission within one (1) year of license issuance.

On March 19, 1998 the Wisconsin Department of Natural Resources, in a letter to North American Hydro, Inc. commenting on the proposed Water Quality Monitoring Plan for the Oconto Falls (Lower) Hydroelectric Project (FERC Project No. 2689), recommended coordination for concurrent water quality studies with the Oconto Falls (Upper) Hydroelectric Project, located approximately 2000 feet upstream.

On May 18, 1998 the FERC granted a request by N.E.W. Hydro, Inc., submitted on March 25, 1998, for a one-year extension of all license article stipulated deadlines, extending the deadline for plan submission to November 19, 1999.

On November 19, 1998 the FERC approved the Water Quality Monitoring Plan for the Oconto Falls (Lower) Hydroelectric Project to commence in 1999 and once every five (5) years thereafter for the 30-year term of the license. The FERC additionally commented that the licensee may propose to begin water quality monitoring at the Oconto Falls (Upper) Hydroelectric Project in the year 2004 in order to run concurrently with the Oconto Falls (Lower) Hydroelectric Project water quality studies.

It is the intent of this plan to initiate water quality monitoring in the year 2004 and once every five (5) years thereafter for the term of the current license in order to execute water quality studies concurrently with the Oconto Falls (Lower) Hydroelectric Project Water Quality Monitoring Plan timeline.

Purpose of Studies

Article 405 of the license states that "The purpose of this monitoring plan is to ensure that releases from the Oconto Falls Project maintain the following state standards, except when natural conditions prohibit attainment of the standards: (1.) the DO shall not be lowered to less than 5 milligrams per liter at any time; (2.) the temperature shall not exceed 89° Fahrenheit at any time; and (3.) the pH shall be within the range of 6.0 and 9.0".

Study Sampling Periods

Study sampling will be conducted July 1, 2004 through September 30, 2004 and every 5th year interval thereafter for the term of the license. Study sampling will coincide with sampling at the Oconto Falls (Lower) Hydroelectric Project (FERC Project #2689). The July through September sampling period represents the typical annual period of minimum dissolved oxygen levels in the Oconto River resulting from a combination of high ambient temperature, low river flow, and aerobic oxygen consumptive processes.

Study Design

Sampling Protocol

Sampling protocol will be consistent with "Water Quality Monitoring Plan Per License Article 404 for the Oconto Falls (Lower) Hydroelectric Project - FERC Project # 2689 - N.E.W. Hydro, Inc." as approved by the FERC on November 19, 1998.

Monitoring Parameters (Reservoir):

1. Dissolved Oxygen Concentration
2. Water Temperature
3. Stream Flow
4. Time of Day

Monitoring Parameters (Tailwater):

1. Dissolved Oxygen Concentration
2. Water Temperature
3. pH
4. Stream Flow
5. Time of Day

Reservoir Sampling:

One (1) reservoir sampling event per week will be conducted for dissolved oxygen concentration and water temperature in a surface to bottom profile at one (1) meter intervals at one (1) pre-determined location representing the maximum depth in the reservoir.

Sampling will be performed manually from a boat at a location determined using two (2) measured lines attached to the boat restraining barrier to provide location repeatability for each of the weekly samplings. Reservoir surface to bottom depth will be recorded during each sampling period at the pre-determined sampling location. Dissolved oxygen concentration and water temperature will be sampled with an approved and properly calibrated electronic sampling device at one (1) meter depth profile intervals including a reading at 100mm below the surface and 100mm above the bottom of the reservoir. Power production and operation log data for the sampling day will be obtained from the Oconto Falls (Upper) Hydroelectric Project (FERC Project # 2523) and Oconto Falls (Lower) Hydroelectric Project (FERC Project # 2689) in order to calculate river flow volume during the sample day. Sampling will also be conducted above the reservoir at or upstream of the State Highway 22 Bridge.

Tailwater Sampling:

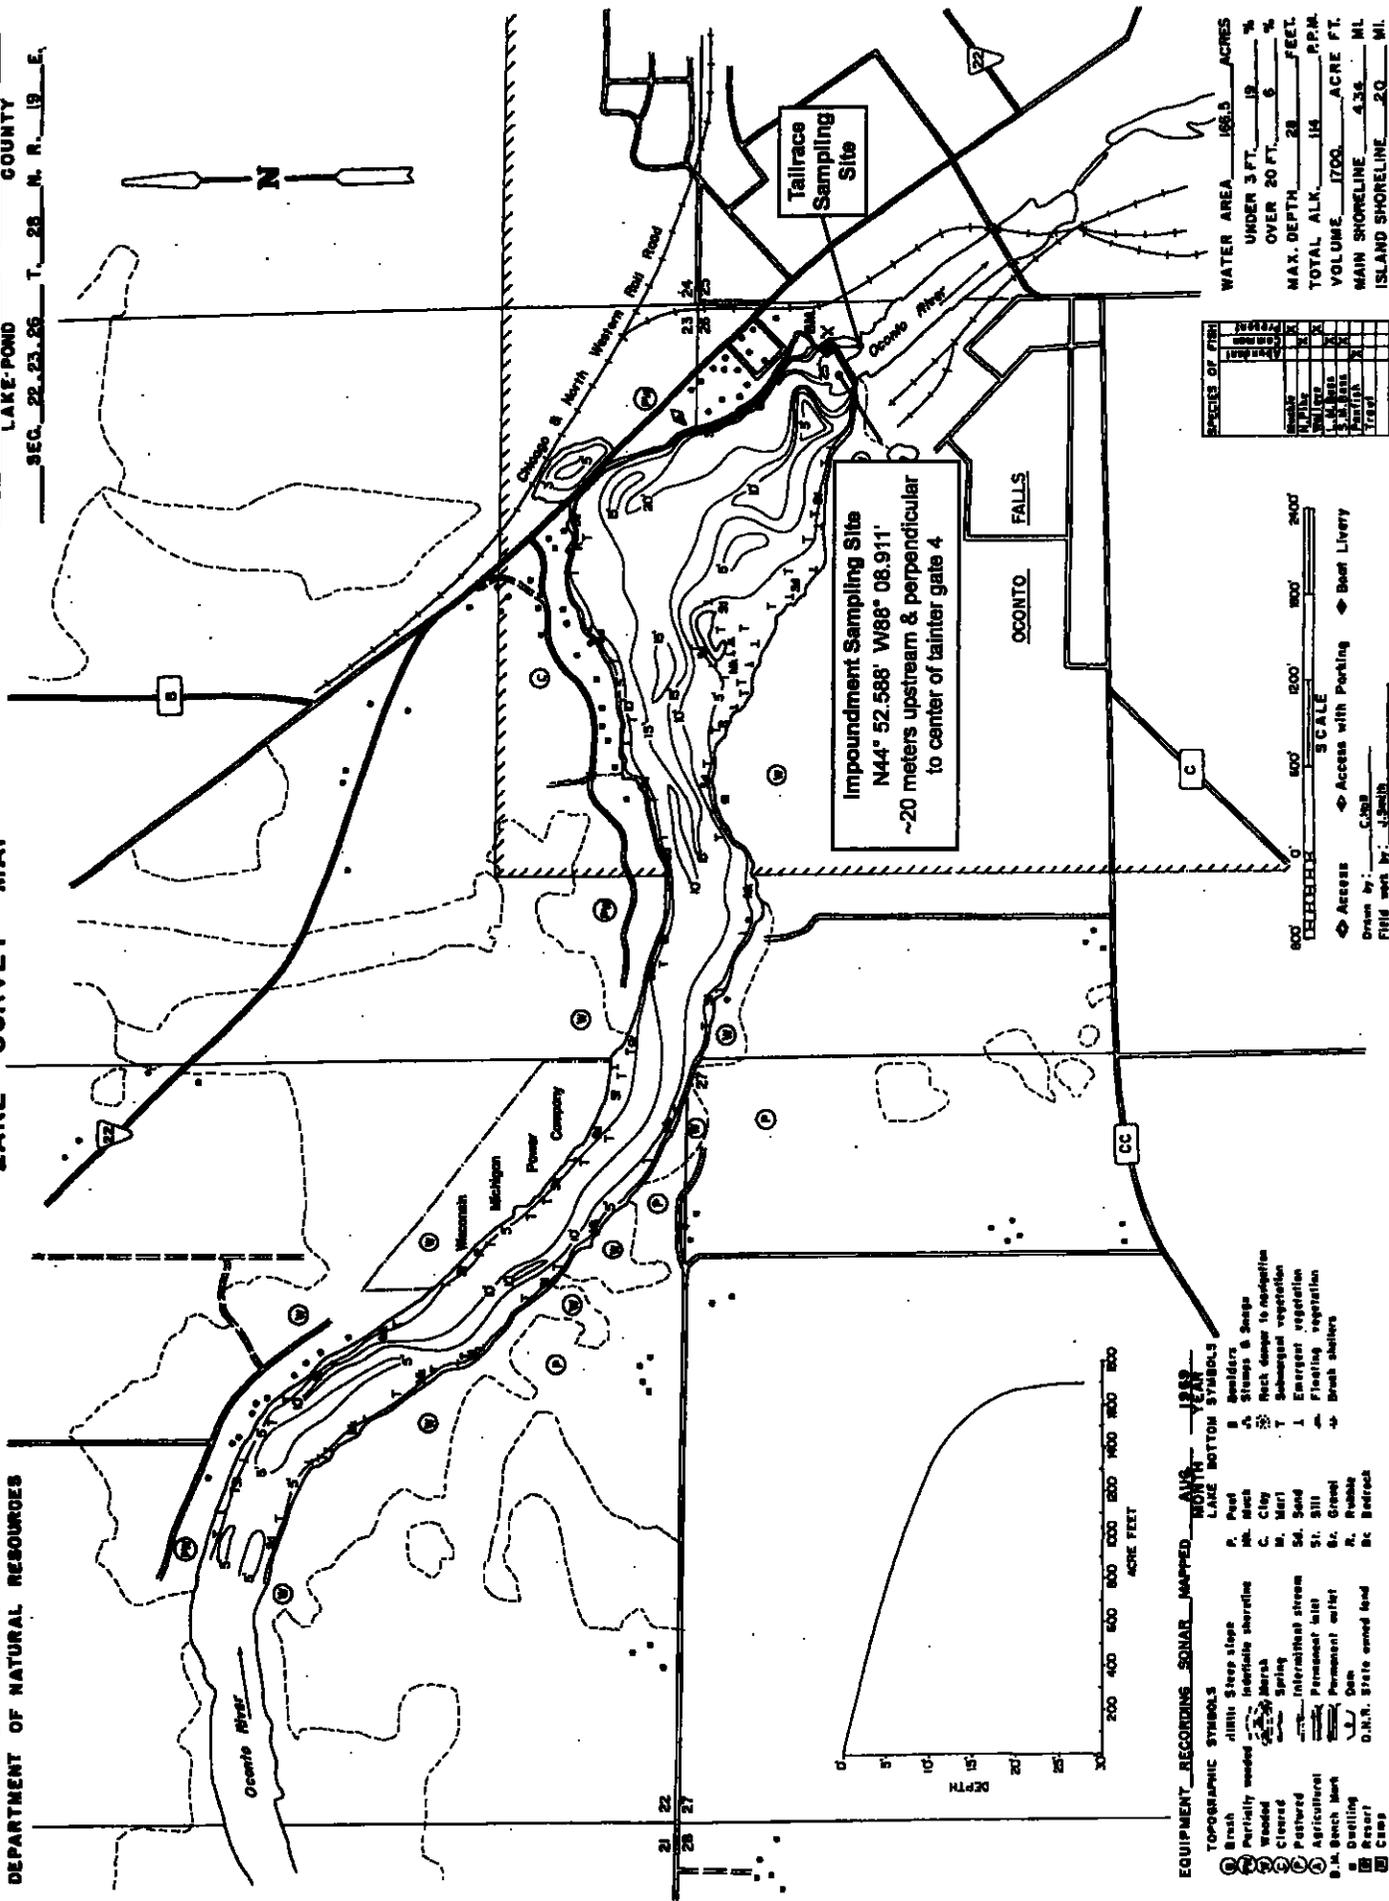

Continuous thirty (30) minute interval sampling of dissolved oxygen concentration, pH, and water temperature will be taken in the river immediately below the project tailrace.

Sampling will be performed using an approved and properly calibrated self-contained submersible sampling and data-logging device placed in a location representative of the release of water in the tailrace. The monitoring device will be located approximately twenty-five (25) feet downstream from the land peninsula below the left concrete non-overflow section of the dam at a point approximately ten (10) feet from the north embankment of the Oconto River. The sampling/logging device will include a sensor array containing standard dissolved oxygen, pH, and water temperature sampling probes. The logging device will be programmed to record dissolved oxygen concentration, pH, and water temperature measurements at thirty (30) minute intervals for the continuous period from July 1 through September 30. A maintenance check will be performed on the sampling/logging device once per week. This check will include removal of any accumulated debris and aquaculture, verification of device placement, verification of operation and device calibration. Maintenance procedures are based on the use of presently available equipment. Future maintenance activities could differ due to changes in equipment development. Power production log data for the sampling period will be obtained from the Oconto Falls (Upper) Hydroelectric Project (FERC # 2523) and Oconto Falls (Lower) Hydroelectric Project (FERC # 2689) in order to calculate river flow volume during the sampling period. Accumulated sampling data will be downloaded from the sampling/logging device once per month (during the first week of the following month) for intermediate analysis.

July 2004 Sampling Data

RESERVOIR SAMPLING LOG

2004 Water Quality Study - Oconto Falls (Upper) Hydroelectric Project - FERC #2325

Date: JUNE 30, 2004

Pre-Sampling Data:

Time: 4:15 pm Barometer: 29.97 Air Temp: 27.8 °C Wind Speed: FRM SW @ 15-17

Cloud Cover: MOSTLY SUNNY - 10% CLOUDS

Precipitation within Last 24 Hours: NONE

Equipment Calibration:

YSI D.O. Membrane Changed in Last 24 Hours? Yes No If Yes, Time Changed: _____

YSI Battery Status: 6.36 volts

YSI Calibration Time: 4:17 pm Method: AIR (Air, Winkler Titration, Saturated Water)

Sampling Depth Profile:

Location #: 1 Measured Depth to Bottom: 7.87 METERS

YSI 51b Sample Data

DEPTH	TIME	DO (mg/L)	TEMP (°C)
100 mm below surface	4:20 pm	9.60	21.0

RE: 2004 Water Quality Monitoring Data
Oconto Falls (Upper) Hydroelectric Project (FERC #2523)
Oconto Falls (Lower) Hydroelectric Project (FERC #2689)

Mr. Reyburn,

Enclosed are the draft copies of the 2004 Water Quality Monitoring data compiled from impoundment and tailwater sampling performed during July 1 through September 30 of 2004 for the two Projects listed above. This is the first-session data collected for Oconto Falls (Upper) Hydroelectric Project (FERC #2523) and second-session data collected for Oconto Falls (Lower) Hydroelectric Project (FERC #2689) under their respective FERC approved Water Quality Monitoring Plans.

Per Plan design, sample collections were coordinated between these projects to establish a long-term database for water quality analysis and trending of the Oconto River at these established sampling locations.

I would appreciate it if you would look through the data and provide any feedback within the next 30 days. If you have any questions, please feel free to contact me at 920-293-4628 ext #15, via mail, or via e-mail @ loeffler@vbe.com.

Sincerely,

Thank you, Jim, for the quick response.

I have passed along your request to our Oconto Falls dam operators and our regional operations manager to monitor for zebra mussels. I asked them to monthly or bi-monthly check underwater equipment and submerged structures for any evidence of the mussels, as well as keep an ear tuned for any shoreline property owners who may have seen mussels on their boat transoms, motor lower units, pier pilings or washed up on their shorelines. If the operators identify anything immediately below, between, or above the dams, they will let me know and I will immediately pass on the information to you. If you have any other suggestions, let me know and I will pass it along.

Thanks again,

Steve

Steve - I looked at the draft reports today and they look good. The continuous monitoring data from the lower and the upper tailwater sampling are very consistent. The only recommendation I have is to include a map in each report showing the sample locations above and below both dams on the same map. As an aside, I think you spoke to Charmaine Robaidek from DNR about zebra mussels. The Oconto River at the Oconto Falls pond are on the watch list for zebra mussels. Veligers have been found in the Oconto Falls Pond but no adults have been found. Could you and the dam operators keep a look out for adults as a part of routine operation and notify me if any are found? Thanks

RE: 2004 Water Quality Monitoring Data Final Report
Oconto Falls (Upper) Hydroelectric Project (FERC #2523)
Oconto Falls (Lower) Hydroelectric Project (FERC #2689)

Ms. Harding,

Enclosed are the Final Report copies of the 2004 Water Quality Monitoring data compiled from impoundment and tailwater sampling performed during July 1 through September 30 of 2004 for the two Projects listed above.

Draft copies of these reports were sent to Mr. Larry Thompson - Staff Biologist, U.S. Fish and Wildlife Service and Mr. Jim Reyburn - Water Quality Biologist, Wisconsin Department of Natural Resources on January 7, 2005 for solicited review per the approved Article 405 Water Quality Monitoring Plan for Oconto Falls (Upper) Hydroelectric Project (FERC #2523) and approved Article 404 Water Quality Monitoring Plan for Oconto Falls (Lower) Hydroelectric Project (FERC #2689).

I have incorporated Mr. Reyburn's single comment request by adding into each report an aerial photo location map indicating the sampling locations of both studies.

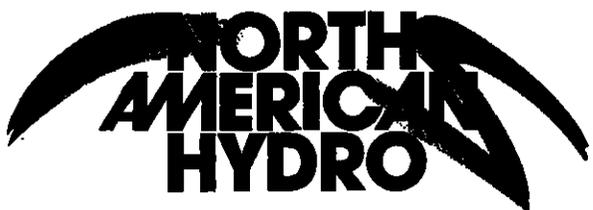

I did not receive any comments from Mr. Thompson for either of these report's draft copies.

If you have any questions regarding these reports, please feel free to contact me at 920-293-4628 ext #15, via mail, or via e-mail @ loeffler@vbe.com.

Sincerely,

Mr. Reyburn,

Enclosed are the Final Report copies of the 2004 Water Quality Monitoring data compiled from impoundment and tailwater sampling performed during July 1 through September 30 of 2004 for the two Projects listed above.

I thank you for your time in reviewing and commenting on the draft copies of these reports sent to you on January 7, 2005. I have incorporated your single comment request by adding into each report an aerial photo location map indicating the sampling locations of both studies.

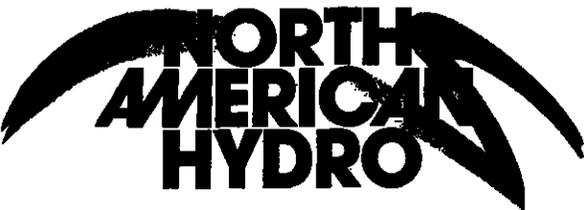

I did not receive any comments from Mr. Larry Thompson - Staff Biologist, U.S. Fish and Wildlife Service in New Franken, Wisconsin for either of these report's draft copies.

Once again, thank you for your review and comments.

Sincerely,

Mr. Thompson,

Enclosed are the draft copies of the 2004 Water Quality Monitoring data compiled from impoundment and tailwater sampling performed during July 1 through September 30 of 2004 for the two Projects listed above.

As I did not receive any solicited comments from you since the January 7, 2005 submission of the draft reports, I must assume that you have no comments.

I have incorporated Mr. Jim Reyburn's (Water Quality Biologist, Wisconsin Department of Natural Resources) single comment request by adding into each report an aerial photo location map indicating the sampling locations of both studies.

Thank you for the opportunity to solicit your comments for these reports.

Sincerely,
